Did you know? In October 2020, the new CASA Manual of Standards comes into effect, bringing a number of changes to RePL training, which we believe will result in a more intensive curriculum, a longer course duration, stricter assessments and potentially higher priced courses, **so consider getting your RePL before the rules change.**

Enrol in our 5-day Remote Pilot Licence (RePL) Training Course:

You will learn about the equipment, airspace regulations, weather, risk assessments, maintenance, emergency procedures and more. **On successful completion of the course, you will be licensed to conduct commercial operations under a company's Remote Operator's Certificate (ReOC) with remotely piloted aircraft systems under 7kg.**

Our aim is to equip all RPA operators with the knowledge and skills required for safe, competent and efficient unmanned aircraft operations in a variety of applications; and to provide further mentoring to ensure you (and your equipment) reach full potential.

Visit scoutaerial.com.au/training/repl for more info.

Offer valid for courses commencing before 30 Sept 2020. Conditions subject to change.
